## Project Description :-

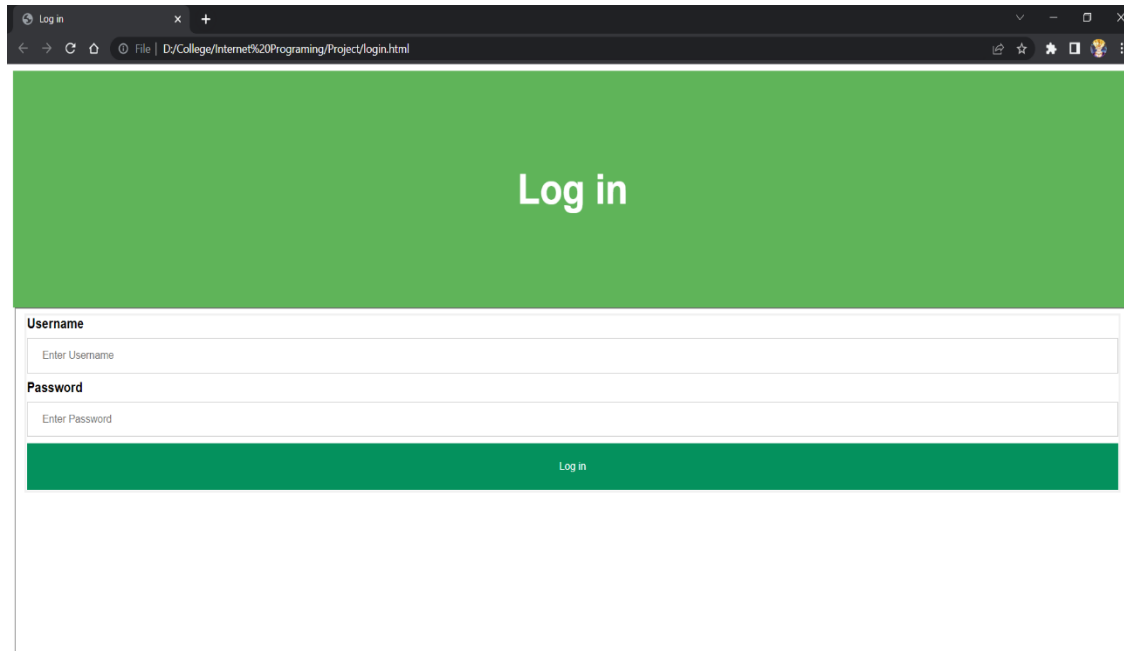

Our Project is a demo of a book store where you can browse through books , see their details(author, category, .. etc) then decide if you want to add them to your cart and buy them .

You can browse between the “home page” and the “About” page at any time, and you can also log in as a user .

# Home Page:

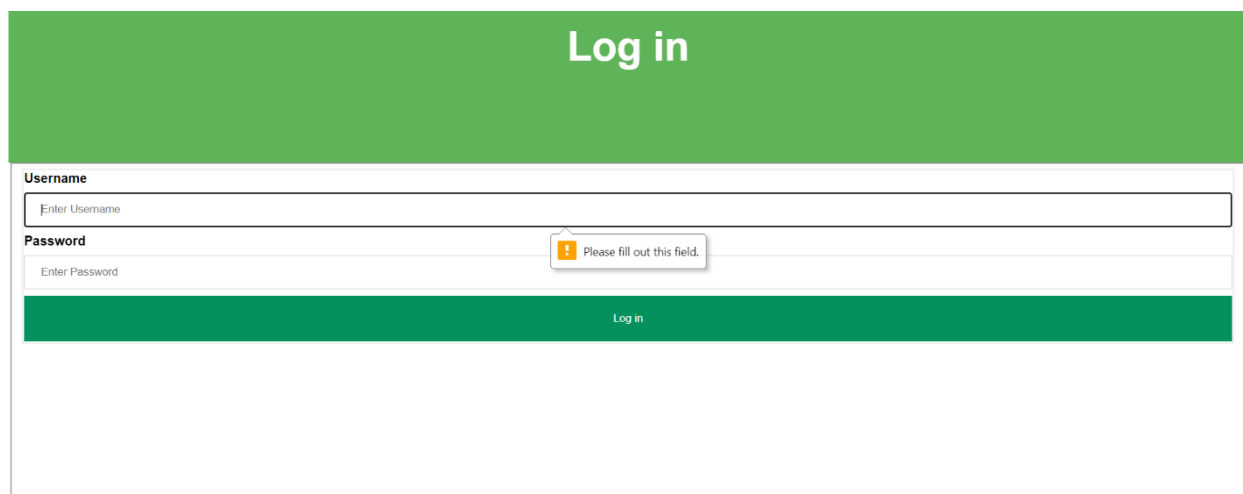

Log in :

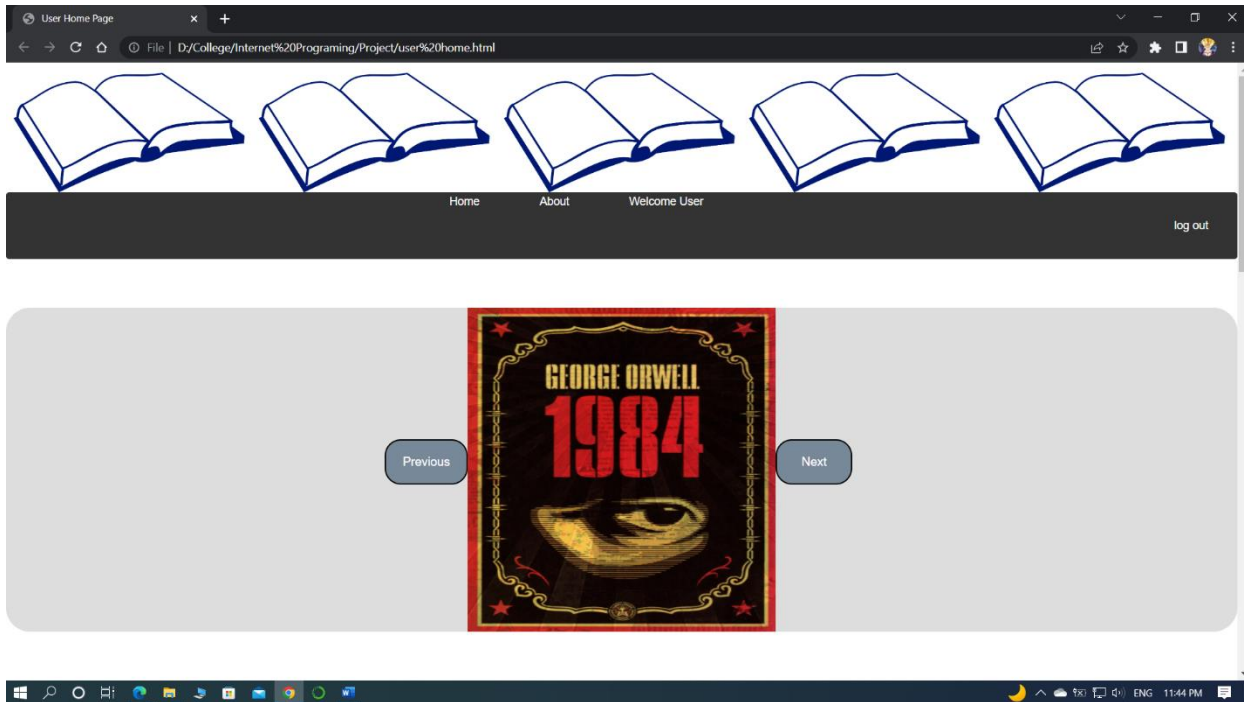

A screenshot of a web browser window. The address bar shows the file path: `D:/College/Internet%20Programing/Project/login.html`. The page has a green header with the text "Log in" in white. Below the header, there are two input fields: "Username" and "Password". The "Username" field has the placeholder text "Enter Username" and the "Password" field has the placeholder text "Enter Password". Below these fields is a dark green button with the text "Log in" in white.

If you attemp to log in while the either of the two fields are empty you will get an alert.

A screenshot of the same login form, but with a validation alert. The "Username" field is empty and has a red border. A small orange alert box with a white exclamation mark is positioned over the "Password" field, containing the text "Please fill out this field." The "Log in" button is still visible below the fields.
